

Aqua-Tech Services LLC will be hosting a demonstration of the Kongsberg Maritime EM 2040 Multibeam Echosounder & Seapath 320+ Inertial / GPS Unit. The demonstration will be conducted at the HWY 190 Bridge in Baton Rouge, Louisiana from January 17-19, 2012. You are cordially invited to attend as we broaden our product base and partnership with Kongsberg Maritime. Please RSVP to dwayne@aquatechservices.com with the number of people and date you will attend. We look forward to your attendance.

KONGSBERG

The EM 2040 multibeam echo sounder is the first system to bring all the advanced features of deep water multibeam to the near bottom sounding environment. The basic EM 2040 has four units, a transmit transducer, a receive transducer, a processing unit, and a workstation.

The Seapath 320+ product is developed specifically for the hydrographic and other high precision applications where heading, position, roll, pitch, heave and timing are critical measurements. The product combines inertial technology together with GPS and GLONASS satellite signals. Core components in the product are the MRU 5+ inertial sensor, the two combined GPS/GLONASS receivers, the Processing and HMI Unit.
